

STEP ①

First, you need to start with a chocolate transfer sheet that has your desired image or design. You can either print your own custom images onto Inkedibles Chocolate Transfer Sheets using a printer that is dedicated to using only edible inks (use Inkedibles Edible Inks and Inkedibles Transfer Sheets for consistent results), or you can use pre-printed transfer sheets such as those available from Inkedibles. If you are printing your own design, make sure to print it in "mirror image" - this is a print setting available on most printers and is sometimes referred to as "T-Shirt Transfer" mode. Once you have your printed transfer sheet, you can insert it into a chocolate transfer mold if you are looking to make custom shaped chocolates, or you can still choose to transfer the image to wet chocolate without a mold by following the next steps.

Print your own transfer sheet

OR

Use pre-printed transfer sheets

STEP ②

You will need one or more chocolate transfer sheets. You will also need chocolate-flavored candy coating, or molding chocolate. Finally, you will need an offset metal spatula.
